IMAM KHAN

Bengaluru, India | Ph: 6291015427 | imamk8114@gmail.com | LinkedIn

SUMMARY

Software Developer with over 6 years of experience in building user friendly, responsive and scalable applications using JavaScript, Typescript, React, Node.

SKILLS

- **Languages:** Javascript, Typescript, ES6, HTML5, CSS3, LWC, Apex, Java
- **Frameworks/Libraries:** ReactJs, NodeJs, ExpressJs, Redux, Ant Design, Material-UI
- **Tools:** Docker, Kubernetes, AWS, Git, Kafka
- **Databases:** MongoDB, MySQL, Parse Server
- **Cloud/AI:** Claude, Cursor MCP
- **Others:** Context API, Hooks, Webpack, Storybook, Cypress

WORK EXPERIENCE

SALESFORCE
Bengaluru, India

Member of Technical Staff
April 2025 - Present

Achievements:

➢ Engineered and optimized complex **Lightning Web Components (LWC) within OmniStudio Builder**, enabling thousands of Salesforce admins and developers to create guided experiences with zero code; partnered cross-functionally with Product, UX, and Core Platform teams to support versioning, state persistence, and metadata-driven behavior.

➢ Built on and contributed to **OmniStudio's metadata-driven low-code runtime and server-side LWC code-generation pipeline** (`OmniScriptGenerator` → `OmniScriptBuilder` → `template/class/CSS builders` → `RaptorCompilerHelper`), compiling admin-authored JSON into real LWC bundles on demand and producing dual-themed HTML (SLDS + Newport), FreeMarker-templated JS, and compiled `ModuleDef` definitions.

➢ Owned and extended runtime LWC elements in a **~90-component shared library/base-class hierarchy**, including WCAG 2.1 fixes, ARIA patterns, semantic markup, focus management, step-chart focus-order fixes, and prevention of unavailable-step activation across builder interfaces.

➢ Engineered an **event-driven data-JSON aggregation model** using `omniaggregate` bubbling to a Header root and non-proxied string payloads, eliminating LWC reactive-proxy `JSON.stringify` performance overhead on large scripts.

➢ Solved **cross-namespace component resolution** so one generator supports managed-package and core Salesforce orgs through runtime tag remapping; maintained strict backward compatibility through additive-only changes, stable `@AuraEnabled` signatures/preference keys, downstream-safe Spring beans, instrumentation, metrics, and UPL error logging.

➢ Leveraged **MCP and Cursor rules** to design highly dynamic, configurable UI components, improving reusability and reducing new feature development time by **over 30%**; contributed to internal UI design frameworks and best practices for component composition, theming, and event-driven data binding.

➢ Integrated a **declarative Redux-style Designer** with stores/reducers, 60+ property-set editors, and Luvio/Connect wire adapters, with live preview reusing the production runtime through a shared DESIGNER/PLAYER run-mode switch.

➢ Delivered **AI-assisted component authoring** using Agentforce invocables and `FlexCardSpecToJsonService`, converting LLM design specifications into the same PropertySetConfig JSON consumed by the deterministic generator.

➢ Refactored legacy Aura components into modern LWC architecture, **improving rendering performance and cutting UI response latency by up to 40%** in data-intensive modules; mentored developers on advanced LWC patterns, accessibility, and front-end performance optimization.

FREIGHT TIGER
Bengaluru, India

Software Engineer - II
October 2023 – April 2025

A SaaS product-based company providing advanced logistics solutions.

Achievements:

➢ Led a team of 6 and actively participated in Design, Code review, Backlog grooming, effort estimation, risk analysis, and Agile ceremonies and worked with peers to meet the team's sprint.

➢ Owned Rate Calculation Engine module where users can perform CRUD operations and the system automatically highlights conflicts with existing rules in FRM at the time of creation.

➢ Developed Planning Module for a top manufacturing client using Google OR tools, Express.Js and MongoDb, resulting in a 25% improvement in production scheduling accuracy and a 15% reduction in lead time.

➢ Implemented "Contract bidding" within the existing bidding module, allowing an e-commerce client to negotiate temporary per-kilometre rates with transporters for specific lanes over a predefined period (30-60 days).

DASSAULT SYSTEMES
Bengaluru, India

Software Engineering Specialist
February 2022 - October 2023

Achievements:

- ➢ Translated designs and wireframes into high-quality code and wrote application interface code via JavaScript ES6 following React.js workflows.
- ➢ Implemented WCAG accessibility guidelines and SEO best practices to enhance user inclusivity and improve organic search performance.
- ➢ Optimized legacy code implementations, accelerating front-end compile time by 20% and saving up to 1 hour of developer time every day using Redux-toolkit, React-Router, and Typescript.
- ➢ Created custom communication protocols and utilized event-driven patterns to enable efficient data exchange between independently deployed modules while minimizing coupling.
- ➢ Implemented security patterns such as JWT and performance patterns such as Lazy-Loading and Pre-Loading to improve page loading time to less than 1.2 secs.

TATA CONSULTANCY SERVICES Bengaluru, India

Systems Engineer **July 2019 - February 2022**

Achievements:

- ➢ Automated email notifications for health check details on application servers using smtplib, ssl and python, saving 10hrs a week of manual work.
- ➢ Involved in developing onboarding module for various types of Users like Individuals, Joint Account, Institutional and NRI's on React.js for a leading financial institution.
- ➢ Created and collaborated with a team of 9 people and enriched existing system metrics by 17% by implementing optimized business logic through code.
- ➢ Utilized HTML, CSS, JavaScript to make call Queue dashboards responsive and readable to users.

EDUCATION

TECHNO MAIN SALTLAKE – Kolkata, West Bengal **July 2015 - July 2019**

B.Tech **CGPA- 7.3**
