SUMMARY

Software Developer with **6+ years** of experience building responsive, scalable web applications with JavaScript, TypeScript, React, and Node.js. Experienced in Lightning Web Components, accessibility (WCAG 2.1), performance optimization, leading small engineering teams, and building with generative AI and LLM tooling (Agentforce, MCP, Claude, Cursor).

SKILLS

Languages: JavaScript, TypeScript, ES6, HTML5, CSS3, Apex, Java, Python

Frameworks and Libraries: React, Lightning Web Components (LWC), Node.js, Express.js, Redux, Ant Design, Material-UI

Tools and Platforms: Docker, Kubernetes, AWS, Git, Kafka, Webpack, Storybook, Cypress

Databases: MongoDB, MySQL, Parse Server

AI and LLM: Generative AI, Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Embeddings, Vector Search, Hybrid Search, Agentforce, Model Context Protocol (MCP), Claude API, Cursor, Prompt Engineering, AI-Assisted Development

WORK EXPERIENCE

Salesforce **Bengaluru, India**

Member of Technical Staff *April 2025 – Present*

- Built and optimized Lightning Web Components in OmniStudio Builder, a low-code tool that lets **thousands** of Salesforce admins create guided experiences without code; partnered with Product, UX, and Platform teams.
- Contributed to the metadata-driven runtime and server-side code-generation pipeline that compiles admin-authored JSON into deployable LWC bundles, supporting both managed-package and core Salesforce orgs while preserving backward compatibility.
- Owned runtime components in a shared library of **about 90 LWCs**, delivering WCAG 2.1 fixes, ARIA patterns, and focus-management improvements.
- Improved performance on large scripts by redesigning the event-driven data aggregation model to eliminate reactive-proxy serialization overhead.
- Refactored legacy Aura components to modern LWC, cutting UI response latency by **up to 40%** in data-intensive modules; mentored developers on LWC patterns, accessibility, and front-end performance.
- Used Model Context Protocol (MCP) and Cursor rules for AI-assisted development of configurable, reusable UI components, reducing new feature development time by **over 30%**.
- Delivered generative AI component authoring with Agentforce that converts LLM-generated design specifications into the configuration used by the deterministic generator.

Freight Tiger **Bengaluru, India**
Software Engineer II *October 2023 – April 2025*

- Led a **team of 6** through design, code review, backlog grooming, estimation, risk analysis, and Agile ceremonies.
- Owned the Rate Calculation Engine, supporting CRUD operations and automatic conflict detection against existing rules at creation time.
- Developed a Planning Module for a top manufacturing client using Google OR-Tools, Express.js, and MongoDB, improving production scheduling accuracy by **25%** and reducing lead time by **15%**.
- Implemented "Contract Bidding" in the bidding module, letting an e-commerce client negotiate temporary per-kilometre rates with transporters for specific lanes over **30–60 days**.

Dassault Systemes **Bengaluru, India**
Software Engineering Specialist *February 2022 – October 2023*

- Translated designs and wireframes into production React.js and JavaScript ES6 code.
- Applied WCAG accessibility guidelines and SEO best practices to improve inclusivity and organic search performance.
- Reduced front-end compile time by **20%**, saving up to **1 hour** of developer time daily, using Redux Toolkit, React Router, and TypeScript.
- Designed custom communication protocols and event-driven patterns for data exchange between independently deployed modules.
- Implemented JWT security and lazy/pre-loading patterns, bringing page load time under **1.2 seconds**.

Tata Consultancy Services **Bengaluru, India**
Systems Engineer *July 2019 – February 2022*

- Automated server health-check email notifications with Python (smtplib, ssl), saving **10 hours** of manual work per week.
- Developed the user onboarding module in React.js for a leading financial institution, covering individual, joint account, institutional, and NRI users.
- Collaborated with a **team of 9** to improve existing system metrics by **17%** through optimized business logic.
- Built responsive, readable call-queue dashboards using HTML, CSS, and JavaScript.

PROJECTS

Clinic Protocol Assistant (RAG) **React, TypeScript, Transformers.js, Claude API**

- Built a retrieval-augmented generation (RAG) pipeline that chunks clinic protocols, creates embeddings in the browser (all-MiniLM-L6-v2, Web Worker), and retrieves with hybrid BM25 and vector search merged using reciprocal rank fusion.
- Grounded Claude API answers in the retrieved passages with enforced source citations, falling back to extracted cited answers when no API key is set or the API fails.
- Evaluated retrieval on an 18-question golden set: the correct passage was in the top 3 for **100%** of questions with hybrid search versus **83%** with keyword search alone (**100%** vs **70%** on paraphrased questions).
